

## Authority to Operate (ATO) Process Management

### OVERVIEW

ATO FedTool is a streamlined management solution to empower a successful authority to operate (ATO) process within your organization. Our solution enables government agencies, partners, solutions integrators, and government off-the-shelf providers with a simplified method to plan and meet ATO process requirements. It facilitates the comprehensive collection and organization of system security requirements across baselines to provide a requirements gap analysis and rapidly remediate shortfalls-keeping the ATO process on track.

TechTrend's ATO FedTool helps applications and systems obtain authorization faster and maintain continuous ATO status.

### CHALLENGE

Government cloud applications are required to meet or exceed security controls and regulations to achieve ATO status. FedRAMP, NIST, and DoD cloud security controls comprise the complex security and compliance requirements organizations track for authorization status.

Government agencies must invest large amounts of time, money, and resources to manually author, collect, organize, and track system security requirements to obtain authorization.

### SOLUTION

Start your ATO process and documentation with TechTrend's ATO FedTool. This custom role-based Microsoft Power Platform application is built using Power Apps and Power Automate with SharePoint and Office 365 integrations. This solution provides an easy, centralized solution to document, track, manage, and monitor system ATO requirements against FedRAMP, NIST, and DoD cloud security controls. System security requirements are collected and stored in a secure Dataverse repository. SharePoint manages role-based access to artifacts and documentation and the baseline control environment. Business Intelligence reports provide transformational data visualization and actionable analytics. ATO FedTool has built-in modularity to change the security baseline depending on each customer's ATO requirements. A gated-review process allows for real-time updates, approvals, and notifications to PMOs, ISSOs, cybersecurity managers, and ATO specialists.

The ATO FedTool can be customized to provide user experiences that leverage our human centered-design approach. This solution provides transparent role management for safe, easy, and secure registration. Web roles are configured via Dynamics 365 Portals with entity permissions and record-level based security. Analysts enter implementation statements and security data. ISSOs manage approvals of individual controls. Designated Authorization Officials can review and approve packets ready for continuous authorization. ATO FedTool delivers rapid on-demand comprehensive data management and visualization for your ATO process.

Discover how the ATO FedTool can help your organization track and manage the authorization process.
